4

# ACRYLOSEAL FOUR-IN-ONE

SMOOTH MATT FINISH

## Sealer:

Prevents the topcoat from soaking into the raw substrates or previous paint from bleeding through from the surface. Assists in creating a water-resistant layer between the substrate and topcoat.

## Primer:

Promotes good adhesion between the substrate and the new paint, blocks out stains, smooths out imperfections on rough surfaces and creates a barrier to stop moisture travelling from the substrate to the topcoat.

## Waterproofer:

Seals & protects surfaces against moisture and humidity that can weaken structures and also cause mould and fungus to grow.

## Top Coat:

Used to enhance aesthetics through colour and finish as well as acting as an added layer of protection to prevent moisture, chemicals, heat, and scratches from damaging the paint.

### Save on Cost, Labour and Time

Acryloseal and Acrylotex, are designed to be a one-stop solution for painting projects. These products are formulated to be used as a primer, sealer, waterproofer, and top coat, which can save time and money, as it eliminates the need for multiple products to be used on a single project. Additionally, these products

are alkali, UV, and weather resistant, which provide added protection and durability to the surfaces they are applied to.

These paint products are specially formulated to be used on a variety of surfaces, both

interior and exterior of buildings. They can also cover hairline cracks and plaster imperfections. Acryloseal and Acrylotex have been independently tested and certified to meet certain standards of performance and safety which gives added confidence in the ability to protect and enhance the surfaces it is applied to.
